

WITELS-ALBERT specializes in straightener, feed, drive and guide technology. We produce a range of devices and machines for the production and processing of wire and multi-wire process materials.

The history of the company goes back to 1898. Our US subsidiary and 20 offices worldwide help us export about 65% of what we produce.

Our outstanding production organization (KANBAN) ensures that all of our standard products have short lead times, and it also enables us to provide customer-specific solutions. Continual R&D investment ensures a constant flow innovative products into the pipeline to create more value add for our customers.
